# 360 Synthesis — See how TEG-Blue integrates 30+ global models & frameworks

*For anyone seeking clarity, safety, healing, and system change.*

## **TEG-Blue™ is a complete emotional technology system**

A unified blueprint connecting 30+ models—from psychology and neuroscience to systems theory and AI—into a living, **usable** map for emotional clarity and real-world repair.

→ [The Science Behind TEG-Blue — Connecting +30 Global Models](#)

## **1) What makes this a true 360° synthesis?**

- **Not “theory stacking,” but integration.**

We translate cross-disciplinary science into **visual, practical tools**—gradients, maps, and workflows that people can actually use.

- **Lived experience is part of the method.**

Patterns were derived from real survival, relationships, and repair—not just literature reviews.

- **AI helps bridge disciplines.**

Advanced AI was used to **cross-reference** models, surface hidden links, and reveal blind spots no single field can see alone.

- **A map, not just a paper.**

Designed for therapy, education, leadership, community repair, and **AI safety**—same logic, different contexts.

- **Open and evolving.**

Built for review, correction, and growth with researchers and practitioners.

→ [How All These Frameworks Power TEG-Blue™](#)

## 2) How does the synthesis work?

What we connect and how we fill gaps:

- **Emotions → data you can map.**

We treat feelings as **relational signals** (safety/belonging/threat) and encode them into gradients and tools.

- **Four layers, one language.**

Body (nervous system) • Mind (meaning & logic) • Relationships (roles & repair) • Society (power & bias).

One visual system so people don't need multiple playbooks.

- **Operational safety & accountability.**

The same structures guide human workflows and **AI alignment**—detecting harm, bias, manipulation, and repair pathways.

The process:

- **Pattern recognition** across established theories, tested against **lived, raw experience**.

- Where models contradicted or left holes, **AI-assisted research** helped surface missing connections or next steps.
- Built with **transparent humility**: this is a **bridge**, not a claim of total expertise—meant to be reviewed, tested, and improved.

---

### 3) Where the synthesis lives inside the system

- **Part 1 — The Eleven Emotional Frameworks** (theory layer; the maps)
  - **Part 2 — Interactive Emotional Tools** (practice layer; gradients, tables, glyphs)
  - **Part 3 — TEG-Code & EMLU** (AI layer; emotional logic → structured data & benchmarks)
-
